OPEN SOURCE · ANDROID TV & GOOGLE TV

Pure TV

An ad-free, Apple TV-style home screen anyone can install on their TV.

BEFORE

AFTER

THE RESULT

Calm, symmetric, Apple TV-style.

- Weather, air quality and a 24-hour rain warning, with the time it was last updated
- Full-colour tiles and a dock you can change from the remote
- No ads, no tracking, no recommendation rows

THE BUG WAS A FONT

290 ms → 30 ms

The screen froze every time the weather updated.

MEASURE

I timed every startup step on the TV and logged each slow task on the main thread.

ISOLATE

Turning off text shadows changed nothing. Removing the font weights fixed it.

ROOT CAUSE

Every text view set a weight on a variable font, so Android built a new font variant for each one.

FIX

Bake each weight into its own font file. The screen looks identical.

MEASURED ON A REAL TV

Fast on an everyday TV

Measured on an Android 11 TV with 1.8 GB of RAM

0.75 s

Cold start

from 1.05 s

0.2 s

Switching back to an app

from 0.7 s

30 ms

Weather update

from 290 ms

130 ms

Building the screen

from 360 ms

ADS, HANDLED

Less noise on your TV.

BUILT IN

An ad-free home screen

No promoted rows, no sponsored banners, no trailers playing on their own. Just your apps.

OPTIONAL

Ad blocking across your apps

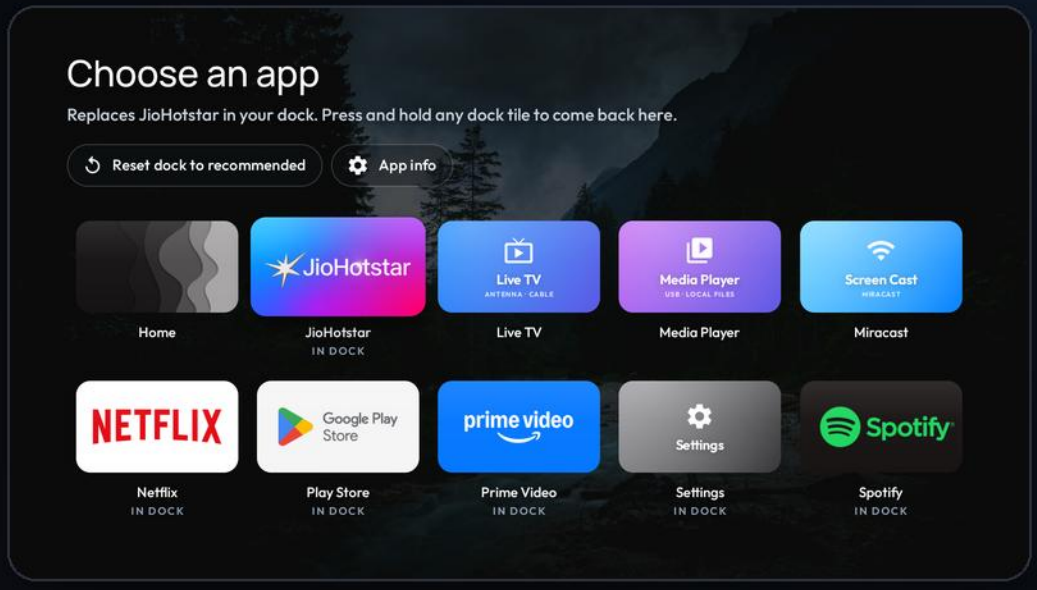

One step in the installer turns on AdGuard DNS, which blocks ad and tracking servers in many apps.

OPTIONAL

Ad-free YouTube

Installs SmartTube, the open-source YouTube app for TVs, with no ads and SponsorBlock.

Every change can be undone. Ads stitched into live streams can't be blocked by any app.

Press and hold any tile to put any installed app in its place.

After five idle minutes: the time, a quote and the weather.

TRY IT

Open source.
One command to install.

- Free and open source: install it and enjoy
- Works on most Android TV and Google TV sets
- One command from Mac, Windows or Linux
- Backs up your TV first; undo everything any time

CODE, SCREENSHOTS AND INSTALL STEPS

github.com/Vardxn/pure-tv

Built on the open-source cleanyourtv launcher, with Claude Code as my pair programmer.
